CARES THROUGHPUT

Cares Throughput is about consumers entering, leaving, and remaining active in the program. The Covid-19 shutdown for 90 days (March to June) dampened admitted consumers for roughly 6 months. It appears that the number of active consumers is currently stable and starting to increase beyond pre-Covid-19 levels.

Note that there were less Emergency Contact Notes across the board for WCCMH clients and the WCCMH-CARES clients during the government shutdown. As the shutdown is over, it seems like Emergency Contact Notes are on the rise again and becoming more stable.

Gender

The data here should be considered as a work in progress since this data was not collected initially due to a number of factors. Most significantly, this data covers all clients subjected to the 'automatic referral' system which means that we are lacking information for many of these cases.

Gender	# Cases Referred	# Active at least 1 Day 3/1/19 – present Cases
Female	640	484
Male	567	434
Other (Specify)	1	0

Race

This data is collected from everyone during the initial screening and referral process.

Typical Length of Stay for Cases that Already Closed

We expect the mean and median to continue to grow as time continues and to fully stabilize after CARES has been fully functioning for two years. We are approaching the two year mark at this time, but it is good to keep in mind that we should consider July 2021 the two year mark since enrolling all of the clients that we previously could not serve was a 3 month process; see throughput chart or graph for a better understanding.

City/Zip Code for Open Cases

The cases here are open by automatic referral and not necessarily fully admitted which is why these numbers are greater than the throughput numbers which requires an initial Assessment and Plan.
